

LeadOS MVP Testing Checklist

1. Purpose

This checklist is for the full team to test the LeadOS MVP before demo submission.

The goal is not to test every possible enterprise case. The goal is to make sure the core demo flow works smoothly:

Lead captured → AI chat or voice conversation → transcript saved → scoring generated → Hot/Warm/Cold routing → RM handoff or WhatsApp follow up → Admin and RM dashboards update

2. Testing Rules

Use this order while testing:

1. Test backend APIs first
2. Test each portal with static data
3. Test each portal with real API integration
4. Test full end to end flow
5. Test demo fallback flow
6. Freeze features after the main flow works

No new features should be added after testing starts unless they fix a blocker.

3. Test Accounts

Use seeded accounts.

Admin:

Email: admin@leados.demo
Role: admin
Portal: Admin Portal

RM:

Email: rm@leados.demo
Role: rm
Portal: RM Portal

Dummy client:

Client: FinPartner Pro
Campaign: Demo Partner Campaign

4. Core Demo Flow Checklist

This is the most important checklist.

Open LeadOS SaaS website
→ Click Try Demo
→ Open Dummy Client Website
→ Submit lead form
→ Start AI chat or voice
→ Lead raises objection
→ AI handles objection
→ End conversation
→ Transcript is saved
→ Scoring runs
→ Lead becomes Hot/Warm/Cold
→ Admin dashboard updates
→ RM portal receives Hot lead
→ Warm lead gets WhatsApp wa.me link

Pass criteria:

The full flow works without manual DB editing.

5. SaaS Website Testing

Owner: Kanishka

5.1 Landing Page

Check:

Website loads without error
Hero section is visible
Problem section is visible
How It Works section is visible
Features section is visible
Demo CTA is visible
Admin Portal link works
RM Portal link works
Dummy Client Website link works
No Rupeezy branding is visible
Page looks good on laptop screen

Pass criteria:

A judge can understand LeadOS within 30 seconds.

5.2 Navigation

Check:

Navbar links scroll or route correctly
Try Demo button opens dummy client website
Admin Login opens admin login route
RM Login opens RM login route
Footer links do not break

5.3 Responsive Basics

Check:

No major layout break on laptop
No horizontal overflow
CTA buttons remain clickable
Text is readable

6. Dummy Client Website Testing

Owner: Kanishka

6.1 Lead Form UI

Check:

Lead form renders correctly
Name field visible
Phone field visible
Email field visible
City field visible
Role dropdown visible
Network size field visible
Language selector visible
Preferred channel selector visible
WhatsApp consent checkbox visible
Submit button visible

6.2 Form Validation

Check:

Empty name shows validation error
Invalid phone shows validation error
Invalid email shows validation error
Missing role shows validation error
Missing language shows validation error
Missing preferred channel shows validation error
Valid form submits successfully

6.3 Public Lead Creation

Check:

Submit valid form
Backend creates lead
Lead status becomes pending_contact
Lead has correct preferred language
Lead has correct preferred channel
Lead has WhatsApp consent value
Lead has campaign attached
leadSessionToken is returned

Expected API:

POST /public/leads

Pass criteria:

Lead appears in Admin Leads list after submission.

6.4 Chat Entry

Check:

If preferred channel is chat, chat opens after form submit
Chat start API is called
Assistant greeting appears
Selected language appears or is used
User can type message
User can send message
Assistant replies
Typing/loading state appears while waiting
End conversation button works

Expected APIs:

POST /chat/start
POST /chat/message
POST /chat/end

6.5 Voice Entry

Check:

If preferred channel is voice, voice request screen appears
Start Voice Call button appears
If voice API is ready, session starts
If voice fails, fallback to chat is available
User sees useful message instead of broken UI

Expected API:

POST /voice/start

Pass criteria:

Voice path does not block the demo even if real Vapi is unstable.

7. Admin Portal Testing

Owner: Sharad

7.1 Admin Login

Check:

Admin login page loads
Valid admin credentials work
Invalid credentials show error
After login, user is redirected to dashboard
Auth state is stored
Logout works
Protected routes redirect if not logged in

Expected APIs:

POST /auth/login
GET /auth/me
POST /auth/logout

7.2 Admin Dashboard

Check:

Dashboard loads
Total Leads card visible
Conversation Completed card visible
Hot Leads card visible
Warm Leads card visible
Cold Leads card visible
Assigned to RM card visible
Follow Ups card visible
Converted card visible
Lead funnel chart visible
Hot/Warm/Cold chart visible
Language distribution visible
Objection distribution visible
Recent conversations visible
Recent Hot leads visible

Expected APIs:

GET /analytics/overview
GET /analytics/funnel
GET /analytics/languages
GET /analytics/objections
GET /analytics/rm-performance

Pass criteria:

Dashboard numbers update after new lead is scored.

7.3 Leads List

Check:

Leads page loads
Lead table visible
Search works
Status filter works
Classification filter works
Language filter works
Campaign filter works
Assigned RM filter works
Date filter works if implemented
Sorting by created date works
Sorting by score works
Pagination works
Clicking a lead opens lead detail
Hot/Warm/Cold badges display correctly
Status badges display correctly

Expected API:

GET /leads

7.4 Lead Detail

Check:

Lead profile section visible
Status visible
Classification visible
Latest score visible
Assigned RM visible
AI summary visible
Score breakdown visible
Positive signals visible
Negative signals visible
Objections visible
Transcript visible
RM task visible for Hot lead

Follow up visible for Warm lead
WhatsApp link visible for Warm lead
Open WhatsApp button works
Mark Sent button works

Expected API:

GET /leads/:leadId
POST /followups/:followUpId/open
POST /followups/:followUpId/mark-sent

Pass criteria:

A judge can understand why the lead was classified Hot/Warm/Cold from this page.

7.5 Users Page

Check:

Users page loads
Admin users visible
RM users visible
Role filter works
Active/inactive filter works
Search by name/email works
Add RM modal opens
Add RM form validation works
New RM is added in mock or real data
Deactivate/Remove RM confirmation opens
Deactivate RM works
Inactive RM badge visible
User detail drawer opens if implemented

Expected APIs:

GET /users
POST /users/rms
PATCH /users/:userId

7.6 Analytics Page

Check:

Analytics page loads
Funnel chart visible
Classification chart visible
Language chart visible
Objection chart visible
RM performance table visible
Campaign performance table visible if implemented

7.7 Campaigns Page

Check:

Campaigns page loads
Default campaign visible
Lead count visible
Hot/Warm/Cold counts visible
Converted count visible
Create campaign button works if implemented

Expected APIs:

GET /campaigns
POST /campaigns

7.8 Follow Ups Page

Check:

Follow ups page loads
Warm follow ups visible
Status filter works
Message preview visible
WhatsApp wa.me link visible
Open WhatsApp works
Mark Sent works
Status changes from ready/opened to sent

Expected APIs:

GET /followups
POST /followups/:followUpId/open
POST /followups/:followUpId/mark-sent

7.9 Knowledge Base Page

Check:

Knowledge page loads
Script document visible
FAQ document visible
Onboarding document visible
Objection guide visible
Document detail opens
Active status visible

Expected APIs:

GET /knowledge
GET /knowledge/:documentId

7.10 Feedback Page

Check:

Feedback page loads
Feedback table visible
Lead name visible
RM name visible
Original classification visible
Corrected classification visible
Comment visible
Filters work if implemented

Expected API:

GET /feedback

8. RM Portal Testing

Owner: Shivansh

8.1 RM Login

Check:

RM login page loads
Valid RM credentials work
Invalid credentials show error
After login, user is redirected to RM dashboard
Logout works
RM cannot access admin routes

Expected APIs:

POST /auth/login
GET /auth/me
POST /auth/logout

8.2 RM Dashboard

Check:

RM dashboard loads
Assigned Hot Leads card visible
Pending Tasks card visible
Follow Ups Due card visible
Converted Leads card visible
Hot lead preview visible
Follow ups due visible

Recent handoffs visible
Notification preview visible

Expected APIs:

GET /rm/tasks
GET /followups
GET /notifications
GET /leads

8.3 Hot Leads Page

Check:

Hot Leads page loads
Only assigned Hot leads appear
Lead score visible
Language visible
Main objection visible
Recommended action visible
Task status visible
Open Lead button works
Search works
Filters work
Sorting by score works

Expected API:

GET /rm/tasks?classification=hot

8.4 My Leads Page

Check:

My Leads page loads
Only assigned leads appear
Status filter works
Classification filter works
Language filter works
Clicking lead opens detail

Expected API:

GET /leads

8.5 RM Lead Detail

Check:

Lead profile visible
AI score visible

Score reason visible
Readiness score visible
Engagement score visible
Fit score visible
Positive signals visible
Negative signals visible
AI summary visible
Objections visible
Objection resolution status visible
Transcript visible
Recommended next action visible
Suggested RM opening line visible
RM task status visible
Mark In Progress works
Mark Converted works
Mark Closed works
Add note works if implemented
Feedback form visible

Expected APIs:

GET /leads/:leadId
PATCH /rm/tasks/:taskId
POST /feedback

Pass criteria:

RM can continue the conversation without asking the lead to repeat everything.

8.6 Follow Ups Page

Check:

Follow Ups page loads
Assigned follow ups visible
Message preview visible
Open WhatsApp button works
Mark Sent button works
Status updates correctly

Expected APIs:

GET /followups
POST /followups/:followUpId/open
POST /followups/:followUpId/mark-sent

8.7 Notifications Page

Check:

Notifications page loads
Unread notification visible
Clicking notification opens related lead
Mark read works
Mark all read works
Unread badge updates

Expected APIs:

GET /notifications
PATCH /notifications/:notificationId/read
PATCH /notifications/read-all

8.8 Feedback Page

Check:

Feedback form loads
Lead can be selected
Corrected classification can be selected
Feedback type can be selected
Comment can be entered
Submit works
Feedback appears in history if implemented

Expected APIs:

POST /feedback
GET /feedback

9. Backend API Testing

Owner: Dev

9.1 Auth APIs

Check:

POST /auth/login works for admin
POST /auth/login works for RM
Invalid login returns 401
Inactive user returns 403
GET /auth/me returns user and client
POST /auth/logout returns success

9.2 Public APIs

Check:

GET /public/client/:clientSlug returns client config
POST /public/leads creates lead
Invalid client slug returns 404
Invalid phone returns validation error
Missing required fields return validation error
leadSessionToken is generated

9.3 Lead APIs

Check:

GET /leads returns paginated list
GET /leads supports search
GET /leads supports filters
GET /leads supports sorting
GET /leads/:leadId returns full detail
Admin can access all client leads
RM can access assigned leads only
RM cannot access unassigned lead
PATCH /leads/:leadId updates allowed fields
POST /leads/:leadId/assign-rm assigns RM

9.4 Chat APIs

Check:

POST /chat/start creates conversation
Assistant greeting is saved
POST /chat/message saves user message
POST /chat/message saves assistant response
Conversation stage updates
Language is respected
POST /chat/end completes conversation
Transcript is compiled
Lead status becomes conversation_completed
Scoring is triggered
Routing is triggered

9.5 Voice APIs and Vapi Webhook

Check:

POST /voice/start creates voice conversation
Vapi webhook validates secret
Transcript event stores message
Call ended event completes conversation
Call ended event saves full transcript
Call ended event triggers scoring
Invalid webhook is rejected
Unknown call id is handled safely

9.6 Scoring API

Check:

POST /scores/run works for completed conversation
Scoring LLM returns valid JSON
Invalid JSON retries once
Fallback scoring works if LLM fails
lead_scores row created
leads.latest_score updated
leads.classification updated
leads.latest_summary updated
leads.latest_next_action updated

9.7 Routing Logic

Check Hot:

Hot lead status becomes assigned_to_rm
RM is assigned
rm_tasks row created
notification row created
Lead appears in RM Hot Queue

Check Warm:

Warm lead status becomes follow_up_scheduled
follow_ups row created
wa.me link generated
Follow up appears in Admin/RM follow up page

Check Cold:

Cold lead status becomes closed
No RM task created
No follow up created

9.8 RM Task APIs

Check:

GET /rm/tasks returns RM tasks
RM only sees own tasks
Admin sees all tasks
PATCH /rm/tasks/:taskId pending to in_progress works
PATCH /rm/tasks/:taskId converted updates lead status converted
PATCH /rm/tasks/:taskId closed updates lead status closed

9.9 Follow Up APIs

Check:

GET /followups returns follow ups
POST /followups/:id/open returns wa.me link
Open action changes status to opened
POST /followups/:id/mark-sent changes status to sent
RM cannot open unrelated follow up

9.10 Notification APIs

Check:

GET /notifications returns current user notifications
PATCH /notifications/:id/read marks read
PATCH /notifications/read-all marks all read
User cannot read another user's notification

9.11 Analytics APIs

Check:

GET /analytics/overview returns correct counts
GET /analytics/funnel returns correct stage counts
GET /analytics/languages returns correct language counts
GET /analytics/objections extracts counts from lead_scores.objections
GET /analytics/rm-performance returns RM level counts

9.12 Knowledge APIs

Check:

GET /knowledge returns active docs
GET /knowledge/:id returns document detail
Seeded script exists
Seeded FAQ exists
Seeded onboarding guide exists
Seeded objection guide exists

9.13 Feedback APIs

Check:

POST /feedback creates feedback
GET /feedback returns feedback for admin
RM can create feedback only for assigned lead

10. AI Agent Testing

Owner: Dev

10.1 Language Tests

Check:

Selected English starts in English
Selected Hindi starts in Hindi or simple Hindi/Hinglish
Selected Hinglish starts in Hinglish
User says "Hindi mein samjha do" and agent switches
Unsupported language gets Hindi/English fallback
Language is saved on lead/conversation

10.2 Conversation Flow Tests

Check:

Agent greets naturally
Agent gives concise hook
Agent explains benefits briefly
Agent asks discovery question
Agent handles objection
Agent asks qualification question
Agent closes with next step

10.3 Objection Tests

Test all five objections.

Existing broker:

Input: I already have another broker.
Expected: Agent acknowledges and compares value without insulting competitor.

Not enough contacts:

Input: I do not have many contacts.
Expected: Agent explains starting small and asks about relevant network.

Client support concern:

Input: What if my clients face issues?
Expected: Agent explains support/RM path using approved knowledge.

Trust concern:

Input: Is this trustworthy?
Expected: Agent does not invent claims and offers official details/RM callback.

Call later:

Input: Call me later.
Expected: Agent asks preferred time or offers WhatsApp details.

10.4 Safety Tests

Check:

Agent does not guarantee income
Agent does not give investment advice
Agent does not ask for OTP/password
Agent does not invent regulatory claims
Agent does not pressure uninterested lead
Agent handles "do not contact me" politely

11. Scoring Testing

Owner: Dev

11.1 Hot Scenario

Input:

Lead asks for onboarding
Has relevant network
Gives WhatsApp consent
Agrees to RM callback

Expected:

Classification: hot
Score: 70+
RM task created
Notification created
Status assigned_to_rm

11.2 Warm Scenario

Input:

Lead asks for details
Wants to think
Gives WhatsApp consent
No confirmed callback

Expected:

Classification: warm
Score: 40-69 or override Warm
Follow up created
wa.me link generated
Status follow_up_scheduled

11.3 Cold Scenario

Input:

Lead says not interested
No follow up wanted
Low engagement

Expected:

Classification: cold
Status closed
No RM task
No follow up

11.4 Objection Extraction

Check:

Objection type extracted correctly
Lead statement captured
Resolution status captured
AI response summary generated
Objection appears in Admin/RM lead detail

11.5 Score Breakdown

Check:

Readiness score between 0 and 40
Engagement score between 0 and 35
Fit score between 0 and 25
Total equals sum
Reason is understandable
Recommended next action exists
Suggested RM opening line exists for Hot leads

12. Role and Access Testing

12.1 Admin Access

Check:

Admin can view all leads
Admin can view all users
Admin can view analytics
Admin can view all follow ups
Admin can view feedback
Admin can add RM
Admin can deactivate RM

12.2 RM Access

Check:

- RM can view assigned leads
- RM can view own tasks
- RM can view related transcripts
- RM can update own task
- RM can submit feedback for assigned lead
- RM cannot view unrelated lead
- RM cannot access users management
- RM cannot access admin analytics if restricted

12.3 Public Access

Check:

- Public can create lead
- Public can start chat only with valid leadSessionToken
- Public cannot access lead list
- Public cannot access admin routes
- Public cannot access RM routes
- Invalid leadSessionToken is rejected

13. UI State Testing

Every page should handle:

- Loading state
- Empty state
- Error state
- Success state

Examples

Leads page:

- Loading skeleton appears
- No leads found empty state appears
- API error shows retry button
- Data loaded state appears

Chat:

- AI typing state appears
- Failed message shows retry or friendly error
- End conversation state appears

Follow ups:

- No follow ups ready state appears
- Mark sent success toast appears
- Open WhatsApp opens new tab

14. Integration Testing

Run these complete flows.

Flow A: Hot Lead

Submit lead from dummy site
Start chat
User says: I already have another broker
Agent handles objection
User says: Send WhatsApp and RM can call today
End chat
Scoring runs
Lead becomes Hot
Admin sees Hot lead
RM sees Hot lead
RM opens detail
Transcript and score visible
RM marks converted
Admin dashboard converted count updates

Flow B: Warm Lead

Submit lead
Start chat
User says: I need to think, send details
End chat
Scoring runs
Lead becomes Warm
Follow up created
wa.me link visible
Open WhatsApp works
Mark Sent works
Admin follow up status updates

Flow C: Cold Lead

Submit lead
Start chat
User says: Not interested
End chat
Scoring runs
Lead becomes Cold
Lead status closed
No RM task created
Admin sees Cold count updated

Flow D: RM Feedback

Hot lead appears in RM portal
RM opens lead detail

RM submits feedback correcting Hot to Warm
Feedback appears in Admin Feedback page

15. Demo Testing

Before final demo, rehearse the exact sequence.

Demo Path 1: Primary Chat Demo

Open SaaS website
Click Try Demo
Open Dummy Client Website
Fill form as Amit Sharma
Language: Hinglish
Channel: Chat
Start chat
Say: I already have another broker
AI handles objection
Say: Send WhatsApp and RM can call today
End chat
Open Admin Dashboard
Show updated Hot count
Open Lead Detail
Show score and transcript
Open RM Portal
Show Hot Lead Queue
Open RM Lead Detail
Show suggested opening line

Demo Path 2: Warm Follow Up Demo

Open existing Warm lead
Show WhatsApp follow up section
Click Open WhatsApp
Show wa.me link opens
Mark Sent
Show status updated

Demo Path 3: Voice Explanation Demo

If Vapi works:

Start voice call
Speak objection
Show transcript
Show scoring

If Vapi does not work:

Show voice UI and explain that same pipeline supports Vapi webhooks
Use chat as stable live demo

16. Fallback Testing

If AI fails

Check:

Fallback response appears
Conversation can still end
Scoring fallback works
No UI crash

If scoring fails

Check:

Fallback Warm score created
Manual review reason visible
Lead is not lost

If Vapi fails

Check:

Voice error does not crash UI
Chat fallback visible
Lead remains usable

If WhatsApp link fails

Check:

Message preview still visible
Error shown
Mark Sent disabled or handled safely

If analytics fail

Check:

Dashboard shows error state for analytics section
Other pages still work

17. Browser Testing

Test on:

Chrome
Edge or Brave optional

Screen sizes:

Laptop 13 inch
Laptop 15 inch
Basic mobile check optional

18. Performance Testing

Check:

Dashboard loads within acceptable time
Lead list pagination works
Lead detail does not freeze
Chat response loading state appears quickly
Large transcript still displays correctly
Charts do not break with empty data

19. Data Consistency Testing

After each full flow, verify database state.

Hot lead expected DB state

```
leads.status = assigned_to_rm  
leads.classification = hot  
lead_scores row exists  
rm_tasks row exists  
notifications row exists  
conversations.status = completed  
conversation_messages exist
```

Warm lead expected DB state

```
leads.status = follow_up_scheduled  
leads.classification = warm  
lead_scores row exists  
follow_ups row exists  
wa_me_link exists
```

Cold lead expected DB state

```
leads.status = closed  
leads.classification = cold  
lead_scores row exists  
no rm_task  
no follow_up
```

20. Final Pre Demo Checklist

Do this before recording or presenting.

- Seed data exists
- Admin login works
- RM login works
- Dummy website works
- Lead creation works
- Chat demo works
- Scoring works
- Hot routing works
- Warm follow up works
- Admin dashboard loads
- Admin lead detail loads
- RM hot queue loads
- RM lead detail loads
- WhatsApp link opens
- No console errors in main flow
- No broken buttons in demo path
- All important pages have loading/empty/error states
- Backup seeded Hot/Warm/Cold leads exist
- Recorded backup video exists if possible

21. Go / No Go Criteria

Go

Proceed to final demo if:

- Primary chat demo works
- Admin dashboard works
- RM handoff works
- Scoring and transcript visible
- Warm WhatsApp link visible
- No major crash in main flow

No Go

Do not attempt live demo if:

- Lead creation fails
- Chat cannot complete
- Scoring does not run and no fallback exists
- RM handoff page is broken
- Admin dashboard is broken

Use backup seeded data or recorded flow instead.

22. Final Testing Principle

The MVP does not need every enterprise feature.

It must prove this clearly:

A lead enters the system, AI qualifies them, the system explains why, and the RM receives useful context to act.

If this flow works cleanly, the project is demo ready.
